1. Introduction. Electronic Trading Procedure

1.1. Electronic Trading Platform (ETP) registration

In order to participate in the electronic trading, you need to register as a Requester by filling in the Registration Form in the open part of the platform. You will be asked to enter general information about your company and list the contact details. Also, you will need to provide the name of the company representative who will be operating at the electronic platform on behalf of your company.

Legal information

Application Dear Operator, Please register our organisation as a Requester in the electronic tender system, so that we can participate in electronic purchase.

Terms and Conditions [Procedural regulation of ETP Operator service provision](#)

I agree with the Terms and Conditions

OK

Figure 1. Registration form (Main menu "Registration" / "Requester registration")

Your Registration Form will be reviewed by the Operator within 3 working days. If all the registration data are correct, you will be granted access to the ETP. In case you made a mistake, your registration will be denied by the Operator, and you will receive a notification letter containing the reasons for denial. In such a case, you can repeat the activity of registration.

1.2. Types of procurement

The ETP provides two types of procurement – auctions and tenders. These competitive procedures have certain differences. When organizing an auction Suppliers have the possibility of reducing the offered price multiply, in real time and competing with other participants. With tender participation, Suppliers cannot correct the offered price or can correct it once, upon your decision. Furthermore, the lowest offered price does not guarantee winning the tender. You may also consider other parameters of Suppliers' offers (quality, experience, company's financial stability, etc). These parameters are listed in the tender documentation by the Requester.

Also both auction and tender have their flexible counterparts – “Auction procedure (flexible)” and “Tender procedure (flexible)”. These procedure types do not imply date restrictions besides date sequence.

1.3. Auction Procedure

Auction consists of 5 consecutive steps (Figure 2):

Step 1. The Requester posts the notice of an electronic auction at the ETP. The Notice is supported by detailed documentation describing the requirements for purchase (goods and services), Suppliers' requirements, as well as the information the Suppliers must provide in their auction participation application. The notice must be posted no later than 10 days before the deadline for application submission. The Requester has the right to make changes in the notice and needs to extend application submission deadline so that until reaching it there are 5 days remaining. The Suppliers are notified of the changes through the website.

Step 2. The Suppliers submit their applications through the website. In the application they briefly describe their offer and attach the documents confirming the compliance of the product with the Requester's requirements. The Suppliers state the initial price of their offer in the application. During the application submission period the Operator protects the confidentiality of the accepted applications and the list of participants is not disclosed. If a Supplier has questions on Requester's documentation, he can send an inquiry through website, asking for an explanation, before the application deadline. The Requester has to respond within 2 working days from the day of the inquiry reception.

Step 3. After the deadline for the application submission, the Operator forwards the accepted Suppliers' applications to the Requester. The Requester reviews the applications and makes a decision on their compliance with the requirements, and the access to the trading. The Participants are notified of the Requester's decision through the website.

Step 4. In the mode of reverse auction, the Participants submit their initial bid through the website in a real time. The initial price stated in the Supplier's application is used as the first bid. During the auction, the Participants can see the best bid, but cannot see the name of the bidder who made the offer. The price can be lowered many times by each of the Participants. The auction ends if nobody offers

a lower price within 10 minutes, but not before one hour after the start of the auction. After that the Operator posts the auction results in a Trade protocol on the website.

Step 5. The Requester determines the winner of the auction on the basis of the Trade protocol, taking into account the final offers of each of the participants. The Final protocol is posted on the website. The Requester has to sign the contract with the Supplier who is listed in the protocol as the winner.

Auction Calendar (application submission deadlines, auction dates, auction results announcement dates) is given in the notice by the Requester.

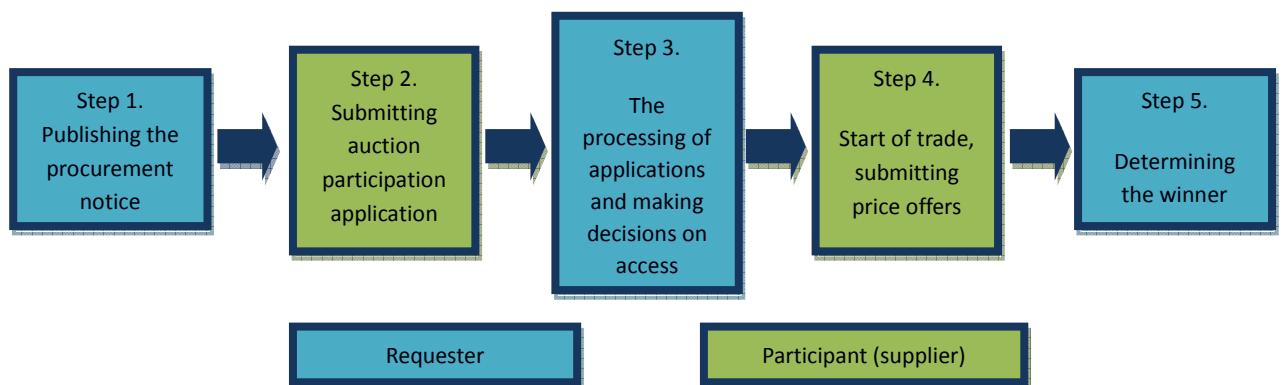

Figure 2. Auction procedure chart

1.4. Tender Procedure

Tender consists of 5 consecutive steps (Figure 3):

Step 1. The Requester posts a notice of an electronic tender on the website. The Notice is supported by detailed documentation describing the requirements for procurement (goods and services), Suppliers’ requirements, as well as the information the Suppliers must provide in their tender participation application. The notice also states the rules and criteria on the basis of which they will choose the winner. The notice must be posted no later than 10 days before the application submission deadline. The Requester has the right to make changes in the notice and needs to extend application submission deadline so that until reaching it there are 5 days remaining. The Suppliers are notified of the changes through the website

Step 2. The Suppliers submit their applications through the website. If a Supplier has questions on Requester’s documentation, he can send an inquiry through the website, asking for an explanation, before the application submission deadline. The Requester has to respond within 2 days from the day of the reception of the inquiry. During the application submission period the Operator protects the confidentiality of the accepted applications and the list of Participants is not disclosed.

Step 3. Upon reaching the deadline for the application submission, the Operator forwards the accepted Suppliers’ applications to the Requester. The Requester reviews the applications and makes a decision on their compliance with the requirements. The Participants are notified of the Requester’s decision through the website.

Step 4. The Requester may grant the Suppliers the right to change (improve) their initial price offer once (hereinafter referred to as **re-trading**). In this case all Suppliers, whose applications are in compliance with the Requester’s requirements, are invited to adjust (improve) their price offer. The invitation includes the best price offered by the bidders. The bidders, who received the invitation, can improve their price within the established deadline. If the bidder did not exercise his right to improve his offer, his original offer is included in the tender results.

If the re-trading right is not granted by the Requester, Step 4 is omitted, in which case the Requester moves on to the application evaluation, and determining the winner.

Step 5. On the basis of the bid analysis, the Requester determines which bidder offered the best bid, and declares the winner of the tender. The decision on the winner is made by creating the Final protocol. The Final protocol is posted on the website. The Requester has to sign the contract with the Supplier who is listed in the Protocol as the winner.

Tender Calendar (application submission deadlines, tender dates, tender results announcement dates) is stated by the Requester in the Tender notice.

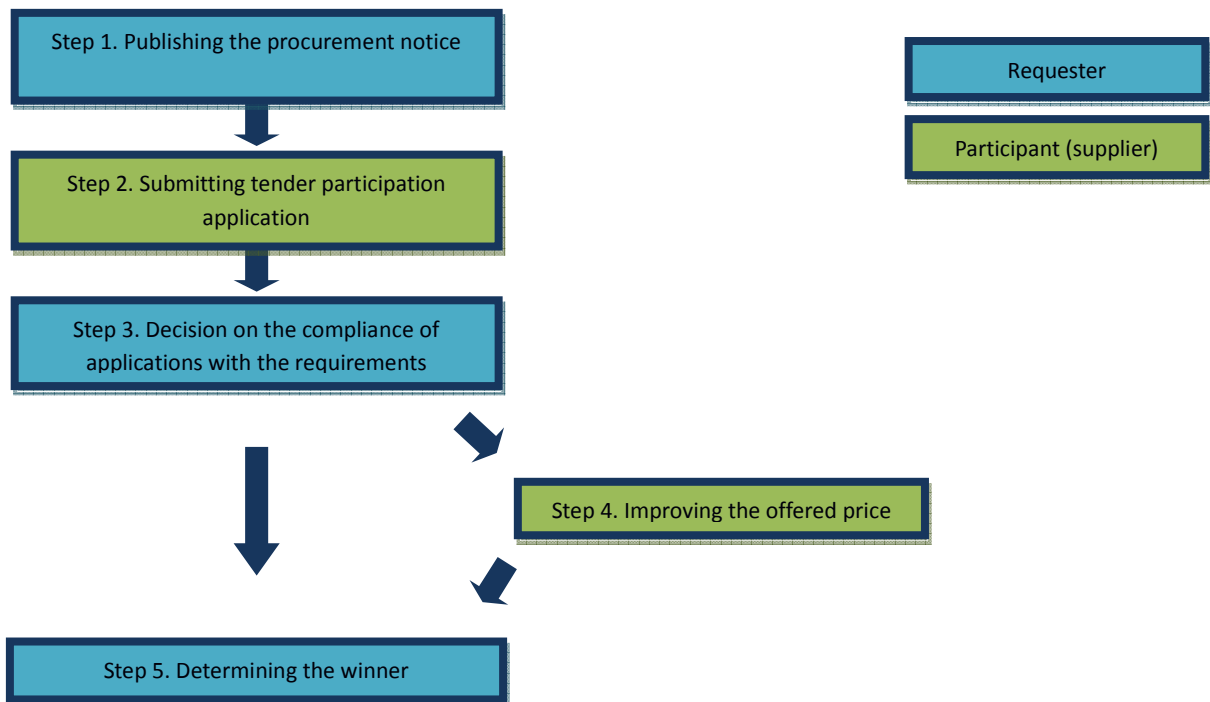

Figure 3. Tender procedure chart

2. General Principles of ETP Operation

2.1. Working with Electronic Documents

ETP Sberbank-AST belongs to the class of specialized systems for the exchange of electronic documents. Any activity on ETP starts with the creation and forwarding of an electronic document to the ETP Operator. Examples of such documents include: registration form, auction or tender notice, instruction to make changes in a posted notice, auction participation application.

[Send document](#)[Save the draft document](#)**Figure 4. Example of an electronic document**

Document consists of sections, whereas sections include various elements (line, date, number, text paragraph, etc). Attached file is a special type of element.

In order to attach file to the document, press the **File attach** button. Then, choose your saved file in the browser window and press the **Upload the file** button. To delete the attached file, you need to press the **Clean** button. In order to replace the previously uploaded file, simply upload a new file. The new file will be attached to the document, and the old one will be deleted.

Figure 5-1. File attach buttons

Figure 5-2. File attach popup

At the bottom of each form you will find two buttons: **OK** and **Save the draft document**.

Pressing the **OK** button will send the document to the Operator for processing. You can see all your sent documents in **Outgoing** folder in **Documents** menu, like in a regular e-mail program.

Sys doc ID	Date	Document type	Bidding number

Figure 7-2. Drafts

The ETP Operator also sends documents to the users (e.g. registration confirmation, auction or tender results notification, etc). Incoming documents are placed in the **Incoming** folder in the **Documents** menu. You can open and read any received document.

2.2. Working with Registers (Lists)

When you click on the **Lists** item, a page with data register opens. The structure of all such pages is identical. Data filter is located at the top of the page. Entering the parameters, you can search for records in the register. The relevant information is displayed under the filter block. When searching for information, you can enter any combination of parameters for filtering or leave all the fields blank and view all the available information.

Register data are displayed page by page. Every page contains twenty (20) records. To scroll through the pages use the navigation buttons below the information block.

Figure 8. List of trade protocols

Usually, the working process at the ETP includes using and managing the information you've found. For example, you can submit your auction or tender application for purchases you've found in the register. The list of actions you can perform opens when you press on a register line. If such a symbol doesn't exist, it means you cannot do anything with this register. The list of available actions will further be referred to as the register's **Context menu**.

3. Basic Functions

3.1. Conducting an Auction

3.1.1. Search for Auctions and Overview of Notices

To review your planned, current or finished auctions you need to use the Trade list (menu item “Bidding” / “Biddings”). You can see the complete list of auctions of all Requesters in the Procurement list (menu item “Lists” / “Procurement list” – you might need to logout first).

To observe notice info it is necessary that you use the “View notice” item of the **Biddings**list context menu. All the information concerning auction are presented in the notice: the description of the

procurement subject and procurement conditions, initial price, application reception deadline, date/time of the auction, etc.

Figure 11. Procurement list

3.1.2. Publishing a new Auction

In order to start the Procurement procedure and invite Suppliers to participate in it, please use the main menu item “Biddings” / “New bidding”. New bidding form consists of 3 sections: General info, Procedure parameters, and Attached documents.

The **General data** section contains the following fields:

- **Procedure name** – it will be used in lists/registers, notifications and other electronic documents.
- **Description** – a short summary of the Procurement specification.
- **Delivery/shipment address**– a quick overview of the related part of the Procurement specification.
- **Initial (maximum) price**– suppliers will not be allowed to place price offers greater than this value. You may leave it blank if “Auction procedure (flexible)” procedure type is selected (please refer to the next section description bellow)
- **Currency**– suppliers will be required to convert their prices to this currency.

- **Goods category** – if the procedure is open the suppliers subscribed to the selected categories will be notified that a new bidding is published. Also one can filter bidding list by a category.
- **Access type** – “Open” or “Closed”. Open procedures are available for all the suppliers. Only invited suppliers can view and participate in closed procedures.
- **Hide protocols and contract info** – check this option if you want the participants to view the minimum information about your decisions within this auction.
- **Approval from parent company is required** – if your company is a subsidiary and supervisor review is required the bidding will not be published until you get the approval.

Access type

Hide protocols and contract info

Approval from parent company is required

Figure 12-1. New bidding form

After that, you need to choose the procedure type – either “**Auction procedure**” or “**Auction procedure (flexible)**” . The flexible procedure allows you:

- Omit the initial price.
- State the submission deadline earlier than 10 days from the publishing date and bypass other date restrictions.

In the opening section you need to state the parameters of the planned auction:

- **Bid submission deadline**–the deadline upon which suppliers can send their bids (participation requests). The notice should be published no less than 10 days before the mentioned date.
- **Explanation request deadline**–the date upon which suppliers can send requests to clarify the procurement specification.
- **Bidding start date/time** –the moment of opening of the auction room, when accepted participants can submit their offers. The bidding start date mustn't be earlier than 1 working day after the Application processing date (and the date of publishing the Access protocol).
- **Bidding closure date/time**– if not specified, the end of the auction session will be sliding: 10 minutes after the last price offer but no less than 1 hour since auction session start. If you need the auction room be opened for a long time set this field.
- **Bidding step** –this is a minimal amount (in the procurement currency), which the participant can use to reduce the price in relation to the best current offer during the auction.

Approval from parent company is required

Figure 12-2. New bidding form

The last section of the New bidding form is **Attached documents**. It contains 2 fields:

- Procurement documentation – procurement specification, contract template etc.
- **Non-disclosure agreement** – suppliers are required to confirm NDA to access the procurement specification. Anonymous users have no ability to access it.

3.1.3. Alteration of Trade Conditions

Until the bid submission deadline, the Requester has the right to change any procurement conditions. The bid submission deadline must be extended so that there are at least 5 days between the moment of the change and the new deadline. The participants who have already submitted their trade participation applications would be notified of the changes in the Procurement notice.

To update the bidding info, you need to find the procurement in the list of biddings (menu item “Bidding” / “Biddings”). The form for changing the procurement conditions is identical to the form for publishing the procurement notice, with only one difference - the field "Reason", in which the reason for entering the alterations should be stated.

The screenshot shows a web application interface for a procurement system. At the top, it displays the date and time '13.04.2015 17:09:56', the user 'Ilya Ruhlyada (Sberbank-AST)', and a 'Logout' link. There is also a 'Language selection' dropdown set to 'English'. Below this is a search and filter section with fields for 'Amount, no less than', 'Amount, no more than', 'Bid submission deadline', 'Goods category', and 'Bidding number'. There are also checkboxes for 'Status' (Bid submission, Bids processing, Waiting, Trading in progress, Summing up of the bidding, Procedure is over, Cancelled, Suspended, Approval, Approved) and a 'Currency' dropdown. 'Search' and 'Reset' buttons are present.

The main part of the interface is a table of biddings. An 'Actions' dropdown menu is open over the table, listing several options:

- View bidding card
- **Trading terms update**
- Trading cancellation
- Publish the next stage
- Trading progress follow up
- Contract list
- Access permission control
- Invited suppliers
- Publish explanation
- Send a message to selected participants
- Send a message to all the participants
- View messages

The table below shows the following data:

Bidding number	Bidding name	Previous	Next	Requester	Initial	Procedure	Bid submission	Bid	Procedure completion date	Procedure status	Actions

Figure 13. Trading terms update

3.1.4. Procurement Cancellation

Until the bid submission deadline, the Requester has the right to abandon the procurement and cancel the trade procedure. To do that, it is necessary to find the wanted procurement in the list of trades (menu item “Bidding” / “Biddings”) and choose the "Trading cancellation" item in the context

menu (same as when entering the changes of procurement conditions). In the opening form the reason for procedure cancellation should be stated, as well as the document confirming the legitimacy of cancellation.

Notice number	Procurement name	Initial (maximum) value	Procedure type	Applications reception deadline	Procedure completion date	Procedure status	Actions

Figure 14. Trading cancellation

3.1.5. Auction Documentation Explanation

Until the explanation request deadline stated in the bidding Notice, the Participants have the right to send the requests for the explanation of procurement documentation. The system will send notifications of receiving such requests into Requester's Income documents. The Requester is obligated to publish the explanation upon request, on the ETP, within 2 days.

The complete list of received requests can be viewed in the list of explanation requests (menu item "Bidding" / "Explanation request list"). The list contains the participants' requests grouped according to procurements and shown as a question-answer list, which allows monitoring repeated questions and questions without answers. In order to find the question without answer quickly, the filter can be used by checking the field "Without answer only" and clicking on the "Search" button.

27	Is this an apple tree?	This's a pineapple bush.	
28	A steeper-than-expected rise in US shale oil reserves is about to change the global balance of power between new and existing producers, a report says.	Over the next five years, the US will account for a third of new oil supplies, according to the International Energy Agency (IEA).	

Figure 15-2. Explanation request list

The explanation can be published on the ETP either by clicking on the link "Provide an explanation" in the notification of receiving the explanation request (Figure 15-1-2), or by choosing the

action "Provide an explanation" beside the question in the Explanation request list (Figure 15-2). You can write the explanation in the opening form. Normally an author only will be notified of the explanation publication. But you can select an option to notify all the invited suppliers or participants (suppliers which sent their bids).

3.1.6. Processing the Submitted Bids

Upon the bid submission deadline, the System will collect all the submitted participants' bids and send them to you for processing as a document "Bids". The Requester processes all the submitted bids and makes the decision on their compliance with procurement requirements. The applications can be viewed either in Incoming documents or in the list of participation requests (menu item "Bidding" / "Requests to participate").

Protocol copy bid.png 

Figure 16-4. Creating Access protocol

In order to create the Access protocol, it is necessary to state the decision for every bid: admit or reject. For the rejected bids, the field "Rejection reason" must be filled in. Furthermore, the information on the protocol itself needs to be stated in the form and the copy of the protocol can be attached. This protocol will not be available for viewing to participants and other requesters.

The participants will be notified about your decision unless you checked **Hide protocols and contract info** option when publishing the bidding.

If you set the bidding as a closed procedure the Operator will create this protocol automatically for you with all the participants admitted.

3.1.6. Viewing the Auctioning

The date and time of the trade start are given in the Bidding Notice. After creating the Access protocol until the end of the auction, the information on the course of trade is available for everyone to see, including the participants in the open part. In order to review the mentioned information, you need to enter the "Auction room" (menu item "Bidding"/ "Auction room").

Page 1 >>

Figure 17-2. Auction room after the start of trading

When the trade starts, the current best price and the estimated time of auction completion can be seen in the Auction room. Once the auction end time is not specified in the Bidding Notice, the closure time is sliding. In such a case the trade is finished if no price offer is placed within a 10-minute gap, however, not before 1 hour from the beginning of the auction. Detailed information on the trade can be obtained by using the "Auction View" item in the context menu.

During the auction session, participants cannot see the information on competitors. Only the numbers of their applications can be seen.

3.1.7. Trade Protocol

Upon the trade session completion, the Operator will automatically create and send the Trade protocol to you, stating all the price offers, as well as the list of the best offers of every participant, in ascending order. Only the Requester can observe Supplier names and their price offers in the Trade protocol. This information is hidden from Suppliers and other Requesters.

3.1.8. Summing up the Auction Results

After the trade completion, you need to confirm the Trade protocol by publishing the Final protocol on the platform. To do that, you need to go to Trade protocol list (menu item “**Bidding**” /“**Trade protocols**”) and choose the "**Summing up the results**" action in the context menu of the appropriate auction. In the form for the creation of the Final protocol, the best participants' offers will be presented in ascending order.

Figure 19-3. Summing up the results – determine the next stage participants

¹ If the contract cannot be signed with the winner due to any reason you may avoid gathering the trade commission the 2nd time.

In both the cases you have to fill out the **Protocol information** section. The optional field “**Protocol copy**” can be used for storing the scan copy of the paper protocol; it will not be shown to participants or other requesters.

After sending this document, if the winner is set the Operator will automatically send the notifications to the participants unless you checked **Hide protocols and contract info** option when publishing the bidding. Also the forbidden to proceed participants will be notified. If the next stage is to be started, the admitted participants will be notified when you publish the next stage bidding.

3.1.9. Publishing Information on the Signed Contract

After determining the winner you are to connect with the contact person, given in the Participant's bid, to address the issues concerning the signing of the contract in accordance with the deadlines stated in the procurement notice.

No later than 1 day from the moment of signing the contract with the Winner, you are obligated to publish the data on the signed contract on the ETP. To do that, find the necessary auction in the bidding list and choose the "**Contract list**" item in the context menu. Another way is to use menu item "**Bidding**" / "**Contract list**".

Contracts

Procedure code: 115

Figure 20-3. Participant notification

3.2. Conducting a Tender

Many activities described in the auction procedure are absolutely identical to those in the tender procedure: changing the procurement conditions, procurement cancellation, explanation of trade documentation, processing the submitted participation applications, publishing the information on the signed contract. However, there is a slight difference in the part concerning the publishing of the Procurement notice, as well as in the manner of determining the winner.

3.2.1. Publishing a new Tender

Publishing the Tender notice is practically completely the same as publishing the Auction notice, with one exception: in the "Procedure" section “Tender procedure” should be chosen and then the following fields should be filled in:

- **Bid submission deadline**— deadline by which suppliers can submit their bids.
- **Bids processing date** – date of Access protocol creation by the tender committee and of publishing the protocol on the ETP.
- **Re-trading is provided** –shows whether the participants, whose access to trade is permitted, will be given the possibility to improve their prices. In other words, when the re-trading is provided, the participants will be suggested to revisetheir price offers comparing the best price within a pre-defined time frame (see the next field).
- **Date of updated offer submission** – established deadline by which the Participants can submit their improved offers. This option is available if the re-trading (price negotiation) is provided in the procedure.
- **Trade finalization date** – date of determining the winner of the tender and publishing the Final protocol.

Figure 21. Tender notice – parameters of procedure

3.2.2. Processing the Submitted Bids

The only difference with the Auction workflow is participant notification. After you created the Access protocol the Operator automatically sends notifications to admitted participants to improve their prices only if re-trading is suggested.

Price improvement request	
Bidding number	89
Bidding name	IT service
Requester's name	Sberbank-AST
Participant's name	EineKleine AG
Number of Suppliers	2
Best price offered	54000.00 EUR

Actions	
<ul style="list-style-type: none"> Improve the price 	

Figure 21-bis. Participant notification –Price improvement request

3.2.3. Summing up the Tender Results

If re-trading is provided in the tender procedure, this part of the procedure is done after the deadline for improved offer submission. Otherwise, it is done immediately after publishing the Access protocol. Operator will automatically create the document "Suppliers' final offers" and send it to you for processing. The document will present final offers of the Participants who are permitted to access the

trade. The complete documentation for processing by Trade committee can be taken from the Bids document. The list of final offers that weren't processed can be found using the menu item "Bidding" / "Supplier final offers". Furthermore, the mentioned document can be found in the Income documents.

• [Summing up the results](#)

Figure 22-3. Suppliers' final offers

By following the link **Summing up the results** you will proceed to filling out the Final protocol form that is absolutely the same as in Auction procedure. There you will be to determine either the winner(s) or the participants of the next stage.

3.3. Multi-stage bidding

You are allowed to build up a sequence of tenders and auctions to gradually balance your needs and suppliers' abilities. Usually, they announce a 2 stage procurement procedure:

- 1st stage is a tender to investigate the market;

- 2nd stage is an auction to improve the price.

In order to start the next phase of the bidding you need to do the 3 actions:

1. Define the participants of the next stage in the **Final protocol** as described in [3.1.8](#).
2. Follow the link “**Publish the next stage**” in the context menu of the appropriate bidding.
3. Fill out the form and save it.

This form is absolutely identical to that you use to start a new Auction or Tender with the only difference: the read-only “**Previous stage**” field is filled out.

The screenshot shows the 'Biddings' management interface. At the top, there is a form with fields for 'Bidding name', 'Amount, no less than', 'Amount, no more than', 'Bid submission deadline', 'Goods category', 'Bidding number', 'Status', and 'Currency'. Below the form are 'Search' and 'Reset' buttons. A table lists several bidding entries with columns for 'Bidding number', 'Bidding name', 'Previous stage', 'Next stage', and 'Requester'. A context menu is open over the table, displaying a list of actions including 'Publish the next stage', which is highlighted in blue. The table data is as follows:

Bidding number	Bidding name	Previous stage	Next stage	Requester
161	OPEN BIDDING SRB-0324-A1			Sberbank Srb a.d. Beograd
162	CLOSED BIDDING SRB-0324-C11			Sberbank Srb a.d. Beograd
160	CLOSED BIDDING C-0320 (STAGE II)	159		Sberbank Srb a.d. Beograd
159	CLOSED BIDDING C-0320		160;	Sberbank Srb a.d. Beograd

Supplier requirements	<input type="text"/>

Figure 22-5. Publish the next stage – the form

After the bidding is published the participants marked in the Final protocol will be automatically invited and notified on that. No other suppliers will be able to send their offers within this bidding. Though you will be able to add suppliers to your **open bidding** using **Invited suppliers** context menu item in the bidding list.

The bidding list contains 2 columns to observe the bidding sequence: Previous stage and Next stage. Also, filtering by bidding number will end up with all the preceding and subsequent biddings in the result set.

Figure 22-6. Filtering by the bidding number

3.4. Closed procedures

Although open procedures usually provide a better financial result in procurement since they suggest enhanced competitiveness, you may require starting a closed procedure due to internal confidentiality restrictions implied by the Legal, Security, etc.

In order to start a closed procedure you have to do 2 steps:

1. Select **Closed procedure** option the **New bidding** form as described in [3.1.2](#).
2. Add suppliers as described below.

Please, use **Access permission control** context menu item in the bidding list to specify the participants of a closed bidding.

Initiators

The users listed below will obtain access within this purchase to view participants' offers and to communicate with suppliers Explanation/Clarification and Message mechanisms. This is applicable to users with limited access that are included into the

Figure 22-7. Inviting suppliers to a closed bidding

3.5. Delegating

Please, use **Access permission control** context menu item in the bidding list to specify:

- **Initiators** – users within your company profile that represent the department initiated this procurement.
- **Trade commission** – users within your company profile that represent the trade commission that will make decision on the participants' offers.

Please, refer to [4.2](#) to learn the steps how to add users with the roles Initiator and Trade commission. Users with these roles will access a read-only access to the procurement documentation and some specific actions **if only** you add them to certain bidding.

Actions available for users with **Initiator** role:

- viewing participants' offers (after the submission deadline);
- procurement documentation explanation (Q & A session, refer to [3.1.5](#));
- instant messaging with participants (refer to [3.6](#)).

Actions available for users with **Trade commission** role:

3.6. Communication

The ETP provides a Messaging service in addition to Q&A function (refer to 3.1.5). The key differences from Q&A are:

- suppliers do not see other suppliers' messages;
- a requester obtains an option to write to selected participants;
- sending messages is available even after the bid submission deadline.

After you are logged in you can see the new messages from participants.

The screenshot displays the Sberbank-AST Electronic Trading Platform (ETP) interface. At the top, there is a logo for SBERBANK-AST and the text 'Sberbank-AST Electronic Trading Platform (ETP)'. Below the logo, there are navigation tabs: 'Lists', 'Bidding', 'My account', and 'Documents'. The main content area is divided into two sections: 'New income documents' and 'New messages'.

4. Account and Profile Settings

4.1. Alteration of Company Profile

The User of the ETP is responsible for the data on their company at the website being up-to-date. The Operator automatically includes these data into the Procurement notice. If the Participant rejects to sign the contract due to containing incomplete, untruthful or outdated Requester's registration data, the ETP Operator does not bear any responsibility.

You can review and change your registration data using the menu item **My account/Company profile**. You can change all the data you entered when you registered at the platform, except for the name and the VAT number.

4.2. Operations with Organization Users

4.1. Overview of User List

You can register several users, who will do business on behalf of your company. All users have equal rights. The User register is available at the menu item **My account/Company user list**. Through this register you can perform basic operations with user data: manage the data, “reset” user password, block and unblock the user’s account.

Authorized person's name	System access login	E-mail	Status	Actions
Авас	cust3	avas@nonaq.su	Active	
Карл Маркс	karl	karl@mail.mail	Active	

Figure 24. User list

4.2. Adding New User

You can add new Users using the menu item **My account/Add user**. In the form for adding a new User you need to fill in the user's name, e-mail and telephone number and set up User login and password for entering the system. Also you should attach a copy of the document confirming the authorization of the new User to do the activities at the platform on behalf of your company.

Figure 25. User adding

4.3. Editing User Profile

If necessary, certain fields of each User (name, e-mail address, preferred interface language) can be edited. In order to do that, you need to use the menu item **User profile** of the Context menu of the User list, whereas for editing your own profile, the menu item you need to use is **User profile** in the **My account** menu.

4.4. Blocking and Unblocking Users

The function of blocking and unblocking Users can be found in the Context menu of the Company **user list**. When blocking and unblocking Users, you need to give the reason for such an activity, as well as, if necessary, enter the text of the message which will be sent to the User via e-mail.

The screenshot shows the Sberbank-AST Electronic Trading Platform (ETP) interface. At the top left is the logo for СБЕРБАНК-АСТ (Automatized trading system). The main header reads 'Sberbank-AST Electronic Trading Platform (ETP)'. Below the header is a navigation bar with buttons for 'Lists', 'Trades', 'My account', and 'Documents'. A 'Back' link is visible. The main content area is titled 'Block user access'. It contains a form with the following fields:

Authorized person's name	Alexey Serous
E-mail	serous@ruiter.rs
System access login	Ruiter
Description of reasons	<input type="text"/>
Message text to the User (empty message will not be sent)	<input type="text"/>

At the bottom of the form are two buttons: 'Send document' and 'Save the draft document'.

Figure 26. Access blocking form

4.5. Resetting User Password

Each User's Password can be reset, and your own password can be altered. Resetting password function is located in the User list in the **Context menu**, whereas your own password altering function can be found at the **Change password** in the **My account** menu.

When resetting the password the system automatically generates a new password for the User (a random combination of numbers) which is sent to him/her via e-mail.
